

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A drawn film which is a single layer film of a layer (A) that is obtained by monoaxial drawing ~~4.3 times or more~~ a three-layer sheet having the structure of (B)/(A)/(B) from 7 to 10 times, and subsequently peeling the layers (A) and (B) from each other, the layer (A) comprising a copolymer that is made from 4-methyl-1-pentene and at least one comonomer of ethylene or an α -olefin having 3 to 20 carbon atoms with the proviso that the α -olefin is not 4-methyl-1-pentene, wherein the copolymer comprises 80% or more by mole of 4-methyl-1-pentene units and said layer does not substantially comprise wax or organic silicone compound, wherein the peel area of the film is ~~50% or more~~ from 70 to 100% wherein the peel area is determined by overlapping layer (A) on a copper foil having roughened surfaces, placing the drawn film and copper foil between metal plates with cushions, pressing by means of a press at 185 °C and 36 kg/cm² for 30 minutes, cooling to 25 °C, and picking up one end of the film, and peeling the film continuously at a rate of 100 mm/minute and a peel angle of 90°, the peel angle being an angle between the roughened copper foil and the film; and the thermal coefficient of contraction of the film is ~~20% or more~~ from 26 to 30% along the direction in which is the film is drawn.

2-4. (Canceled)

5. (Currently Amended) A process for producing a drawn film comprising a layer (A), comprising

the step of drawing, ~~4.3 times or more, a sheet comprising the layer (A) and a layer~~ a three-layer sheet having the structure of (B)/(A)/(B), from 7 to 10 times, wherein the (B) layers are ~~which is~~ formed on the layer (A), wherein the layer (A) comprises a copolymer that is made from 4-methyl-1-pentene and at least one comonomer of ethylene or an α -olefin, except 4-methyl-1-pentene, having 3 to 20 carbon atoms and that comprises 80% or more by mole of 4-methyl-1-pentene units and said layer (A) does not substantially comprise wax or organic silicone compound, and the layer (B) ~~comprises~~ (B) layers comprise polypropylene and/or polyethylene; and

the step of peeling the layer (B) layers from the layer (A).

6. (Canceled)

7. (Previously Presented) A release film, which is the drawn film according to claim 1.

8-12. (Canceled)

13. (Currently Amended) A drawn film according to claim 1, obtained by drawing a multi-layer sheet comprising the layer (A) and ~~a layer (B)~~ layers which ~~[[is]]~~ are formed on the layer (A) and ~~comprises~~ comprise polypropylene and/or polyethylene, to give a drawn multi-layer film having a peel strength between the layer (A) and (B) layers of 500 g/15 mm or less, wherein the peel strength is measured at 23°C and a speed of 300 mm/minute in a T-shaped peel state on the basis of JIS K6854.

14. (Canceled)

15. (Canceled)
